

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method for introducing a foreign matter into a cell, comprising the steps of:  
  
    placing a small particle carrying a foreign matter at a part of a cell surface of a living cell wherein the small particle is a bead fixing the foreign matter,  
  
    boring a hole in a cell wall and/or a cell membrane by irradiating and treating said part of the cell surface with a laser beam, and  
  
    introducing the foreign matter into the living cell.
2. (Original) The method set forth in claim 1, wherein the living cell is a cell of a plant, and at least a part of the cell wall of the plant cell is removed.
3. (Original) The method set forth in claim 2, wherein said at least part of the cell wall is removed by irradiation with a laser beam or by irradiation with the laser beam and treatment with a hydrolysis enzyme in combination.
4. (Previously Presented) The method set forth in claim 1, wherein the small particle is a fine particle having a particle diameter of 0.01  $\mu\text{m}$  to 10  $\mu\text{m}$ .
5. (Previously Presented) The method set forth in claim 1, wherein the small particle is a liposome including the foreign matter.
6. (Canceled)
7. (Currently Amended) The method set forth in ~~claim 6,~~ claim 1, wherein the foreign matter is fixed by adding an aqueous solution containing at least the foreign matter

and a curing agent into a water-in-oil type emulsion having a curable raw material in water, and forming a cured reaction product.

8. (Original) The method set forth in claim 7, wherein the curable raw material is sodium alginate, the curing agent is calcium chloride, and the cured reaction product is calcium alginate.

9. (Previously Presented) The method set forth in claim 1, wherein the laser is at least one laser selected from the group consisting of a YAG laser, an exima laser, an Ar ion laser, a nitrogen laser and a nitrogen-excited color laser.

10. (Previously Presented) The method set forth in claim 1, wherein the foreign matter is at least one material selected from the group consisting of a genetic material, a protein material, an organella, a physiologically active material and an indicating agent.

11. (Original) The method set forth in claim 10, wherein the genetic material is at least one selected from the group consisting of a DNA, a RNA, an oligonucleotide, a plasmid, a chromosome, an artificial chromosome, an organella DNA and a nucleic acid analogue.

12-18. (Canceled)

19. (Currently Amended) The method set forth in claim 1, for introducing a foreign matter into a cell, comprising the steps of:

placing a small particle carrying a foreign matter at a part of a cell surface of a living cell, wherein the small particle is a particle that carries the foreign matter and releases the carried foreign matter after being introduced into the cell,

boring a hole in a cell wall and/or a cell membrane by irradiating and treating said part of the cell surface with a laser beam, and

introducing the foreign matter into the living cell.

20. (Canceled)

21. (Canceled)

22. (Currently Amended) ~~The A method set forth in claim 1,~~ for introducing a foreign matter into a cell, comprising the steps of:

placing a small particle carrying a foreign matter at a part of a cell surface of a living cell, wherein the small particle adsorbs the foreign matter,

boring a hole in a cell wall and/or a cell membrane by irradiating and treating said part of the cell surface with a laser beam, and

introducing the foreign matter into the living cell.

23. (Canceled)
